

MABA Newsletter Index

January 1980 to December 2016

This index (compiled from available issues) will help you locate projects and information that has been published in the MABA newsletter, The Upsetter, within the past 35 years. It is divided into 37 categories to help you quickly narrow your search. Sometimes an article fits into more than one category so it has been placed under the most obvious location, while occasionally being placed under multiple categories. The demonstrator, not necessarily the author of the article, is listed to identify and/or credit the source of the information. Please forward any comments or corrections to the MABA newsletter editors.

Dates of newsletters that were **not** available for inclusion in this index:

May – June 1995;

November – December 1995;

If anyone has copies of these newsletters and could pass on the contents so they can be added to this index, it would be greatly appreciated.

Look over the entire index and note the categories that have a lot of entries, and those that have only a few. Have you been to a demonstration; solved a problem; completed a project; made a jig, fixture or tool that you'd want to share with others? Would a write-up help other smiths get their projects done without going through the problems you've had? Where do your blacksmithing interests lie? Are there many entries in your area of interest? Would an article about your area of interest create some excitement about the subject? Please consider contributing an article to the Upsetter and passing along your experience and information to the MABA membership.

If there are areas or items you are interested in and they have not been addressed in any of the past issues listed, let the newsletter editors know. We may know of an article that has been written by someone in another blacksmithing group, through the newsletter exchange, or an ABANA back-issue. If there has been, it can be passed on to you or it could be included in an upcoming issue of The Upsetter.
